

## Course Specification

**Course Name:** [Network Optimization ]

**Course Code:** DS413

### I. Basic Course Information

Major or minor element of program: Major

Department offering the course: [Operations Research and Decision Support Department]

Academic level: [400 Level]

Semester in which course is offered: First (Fall) Semester

Course pre-requisite(s): [Nonlinear & Dynamic Programming [DS312] ]

Credit Hours: 3

Contact Hours Through:

Lecture	Tutorial*	Practical*	Total
2.5	1.5	0.0	4.0

\* 1.5 hours for **either** Tutorial or Practical

Approval date of course specification: [September 2014]

### II. Overall Aims of Course

[In this course we present the salient concepts associated with network flows and optimization. Emphasis is placed on algorithm development concepts and proofs of complexity. Problems and application provide a grounding context for the network flow algorithms. In addition, stress is placed on implementation issues and how they affect performance. Key network optimization concepts covered:

- Shortest path algorithms
- Maxflow algorithms
- Mincost algorithms
- Network transformations
- Duality
- Mathematical programs that can be viewed as network problems
- Scheduling using network flow approaches ]

### III. Program ILOs covered by course

Program Intended Learning Outcomes (By Code)			
Knowledge & Understanding	Intellectual Skills	Professional Skills	General Skills
[K16,K17,K20 ]	[I11,I12,I13,I14 ]	[P3,P10,P12,P15 ]	[G2,G4,G9 ]

**Course Specification**

**IV. Intended Learning Outcomes of Course (ILOs)**

**a. Knowledge and Understanding**

On completing the course, students should be able to:

- K.1 [Explain the relationship between classical network optimization problems and linear programming.
- K.2 Appreciate how understating the structure of the problem can be exploited to realize more efficient algorithms.
- K.3 Illustrate the data structure and implementation issues associated with the main network optimization algorithms. ]

**b. Intellectual/Cognitive Skills**

On completing the course, students should be able to:

- I.1 Identify a network problem even though it is not originally cast as such.
- I.2 Detect flaws and weakness in proofs.
- I.3 Assess the reason about why one approach is better than the other for a given problem.
- I.4 Solve network problems using the appropriate models.

**c. Practical/Professional Skills**

On completing the course, students should be able to:

- P.1 Understand the merits of algorithmic complexity.
- P.2 Devise algorithms to solve network problems.
- P.3 Apply network optimization on wide range of problems.
- P.4 Demonstrate technical knowledge of Java or Python programming.

**d. General and Transferable Skills**

On completing the course, students should be able to:

- G.1 [Demonstrate Report writing abilities.
- G.2 Work in teams.
- G.3 Acquire problem solving skills. ]

**V. Course Matrix Contents**
